

**KGS delivers a variety of “taste”,
using thermal processing technology
of agricultural products.**

Please leave us from trial manufacture to large-lot production in the large-scale production line.

Dynamic experimental development is a feature, that can not in the lab.

~The flow of the production from trial manufacture~

- **Pre-sample** We present samples from a lot of our prototype developed products for the customer needs.
- **With the supervision of the customer, trial manufacturing in the production line can be done.**
By temperature management and machine setting suited to the material, a product image or improvement will be clear.
- **Evaluation(sensory test)**
The product is to be tested for various elements (taste, aroma, color, texture, etc.) to confirm the completeness of the request of the customer.
- **Production prior to the production**
Through performing a production test of about 1000kg, customize the equipment and the process of manufacture to make the original product possible.
- **Product evaluation** We maintain a double-check system so that the customer can order products with confidence.
FSSC22000 certification (Nara Plant)
JAS organic certification (Nara Plant, Ishikawa Plant)
ISO9001 certification (China Xiamen Plant)
- **Production** The product is checked at each process by its person responsible and, we provide only approved products by our quality control department.
